Easy Handling 'METTEC' 19" Rack Cases

OKW has introduced the 'METTEC' 19" Rack cases, which are manufactured by their METcase™ division. These versatile enclosures feature an attractive front bezel which incorporates unique 'comfort handles' for easy handling. Typical applications will include networking and communications equipment, industrial computers, sound and studio systems, laboratory instruments and industrial control systems etc.

This exclusive and robust range of 19" rack cases is manufactured in aluminum. Available in three standard heights – 1U, 2U and 3U, with depths of 6.59", 10.35" and 14.47", the cases conform to DIN 41594 and IEC standards.

The front bezel is painted in light gray, and the case body is finished in alocrom 1200. Internal guide rails are included for mounting PCBs and chassis plates.

Uniquely, the anodized aluminum front panel can be removed while the case is still in the rack. The front panel kit includes two ABS cover trims, which hide the front panel fixing screws, and are recessed for location of a membrane keypad. Other accessories include chassis plates and a rack mounting kit.

OKW can supply the 'METTEC' rack cases with additional holes for push-buttons, connectors and displays etc., plus silk-screen printed legends and logos. The cases can also be painted in other colors. Standard prices start at \$132.

More information on these enclosures can be found on OKW's website at:
