'SQUID' Remote Control Enclosures from TEKO

TEKO have introduced the 'SQUID' series of hand-held enclosures. These attractive pocket size cases have been designed for housing remote control electronics. Typical applications will include RF and infra-red remote control systems, medical and wellness devices, detection units, personal security equipment etc.

'SQUID' cases consist of three parts, the top and base moldings and a clip-on battery compartment lid. The integral battery compartment will accept two 1.5V AA cells or a 9V cell. The cases are assembled by three self-tapping screws. Internal PCB screw pillars are provided in the top and base parts. The external dimensions are 3.94" x 2.38" x 0.83".

'SQUID' cases are molded ABS (UL 94 HB). The standard colors are light gray or black. The push button moldings are in blue. Optional features include solid ABS or infra-red end panels, a top panel aperture with one, two or three push-button moldings, and a recess in the top panel for fitting a membrane keypad or product label.

TEKO can supply the 'SQUID' enclosures with additional holes for push-buttons, connectors and displays etc., plus silk-screen printed legends and logos, and RFI/EMI shielding. The cases can also be molded or painted in alternative colors. Standard prices start at \$9.

More information on these enclosures can be found on TEKOs website at:
