Versatile 'STRUMENTALIA' Instrument Enclosures

TEKO have introduced the 'STRUMENTALIA' instrument enclosures series. These versatile ABS enclosures have been designed for housing desktop and portable electronics. Typical applications will include test and measurement devices, point-of-sale terminals, medical and wellness devices, machine controllers etc.

The 'STRUMENTALIA' cases are available in two different styles, the standard rectangular instrument cases with or without a bail arm, and the 'PULPIT' style cases with sloping top panel and display area.

The standard cases consist of a top and a base molding, two side location moldings, and two ABS front panels. The cases are assembled by four fixing screws which also locate the molded case feet. The "PULPIT" cases differ by having a sloping top panel which can be specified with or without a display window aperture. The keypad and display areas are recessed to aid mounting of membrane keypads or product labels.

A range of seven standard models is available with external dimensions of 10.55" x

8.50", and heights of 2.48", 2.99", 3.50", 3.74" and 4.25". All models are molded in light gray or black ABS (UL 94 HB).

TEKO can supply the 'STRUMENTALIA' enclosures with additional holes for push-buttons, connectors and displays etc., plus silk-screen printed legends and logos. The cases can also be molded in alternative colors. Prices start at \$46.

More information on these enclosures can be found on TEKOs website at:
