TEKO's New 'MINITEKAL' Miniature Aluminum Enclosures

TEKO have launched their new 'MINITEKAL' range of miniature aluminum enclosures. These versatile and robust housings have been designed for easy assembly of the electronics. The all aluminum design allows good levels of RFI/EMI protection to be implemented. Typical applications will include small hand-held measurement devices, low power Radio equipment, power supplies, peripherals, monitoring systems and detection devices. Due to their small size, 'MINITEKAL' cases can be used as independent units or located in control cabinets.

'MINITEKAL' cases consist of an extruded case body with two die-cast end panels which are assembled by eight self-tapping screws. The case extrusion includes a series of internal guide rails for the PCBs. The end panels have a raised front area for

mounting controls switches, connectors, antennas etc. Two molded rubber gaskets are also included for sealing the mating faces of the end panels and case extrusion.

The cases are available in a useful range of four compact sizes from 2.68" x 1.69" x 0.90" to 4.45" x 2.60" x 0.71". Two standard color combinations are offered: silver or black anodized case extrusions with gray or black painted end panels.

TEKO can supply the 'MINITEKAL' enclosures with additional holes for push-buttons, connectors and antennas etc., plus silk-screen printed legends and logos. The cases can also be anodized or painted in alternative colors. Standard prices start at \$20.

More information on these enclosures can be found on TEKOs website at:
