

LACQUERING

The colors can be produced in our own mixing unit according to RAL Classic. This guarantees consistent high quality and short delivery times. The metallic color RAL 9006 (white aluminum) can be applied as standard. Other metallic colors, as well as Pantone colors (see Form Guide), are available upon request.

- **Lacquers in different degrees of lustre**
According to your needs, from matt to glossy. Matt lacquers prevent undesirable light reflections, and glossy lacquers offer a refined, modern look.
- **Metallic lacquer and color tones**
Finishes in a metallic look.
- **Soft-Touch**
Lacquer like artificial leather to improve the feel of your product. Soft-Touch lacquer gives your products a feel as soft as velvet, ensuring pleasantly reliable operation of handheld instruments, for example. NEW: transparent Soft-Touch lacquer.
- **ESD conductive lacquer**
Special lacquer in black-gray to prevent electrostatic discharges.

We will be pleased to advise you on the technical options available.
